

Connor McGraw

650-605-5877 | Los Altos Hills, CA | [Email](#) | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

EDUCATION

The Nueva School, San Mateo, CA
Diploma June 2022, GPA 4.0, ACT 36

The University of Chicago, Chicago, IL
Class of 2027, BS/MS in CS, GPA: 4.0

Coursework: Systems Programming I + II, Discrete Mathematics, Algorithms, Mathematical Methods of Machine Learning, Software Development
Involvement: Club Basketball Co-Founder, Prototype for Success Cohort Member, KTP Technical Fraternity AI/ML Committee Co-lead, Tech Team

EXPERIENCES

Pear VC - Remote (September 2024 - Present)

Software Engineering Fellow

- Led team developing a Demo Day web app connecting **5,000+** investors with companies, featuring a **React** frontend on **Vercel**, **Supabase**-hosted backend, scalable **RESTful APIs**, secure authentication, real-time data synchronization, and automated emails via **SendGrid**.
- Engineered event tracking and approval system with a **React-based** dashboard, **Node.js** backend, and **PostgreSQL** database, automating event proposals, approvals, and email reminders via **AWS SES**, reducing approval time by **30%** and improving workflow efficiency for **40+ users**.

Pear VC - San Francisco, CA (June 2024 - September 2024)

Software Engineering Intern

- Developed and shipped an automated investment intake system using **Python**, **JavaScript**, **Google** and **Docusign APIs** hosted on **AWS Lambda** to generate legal documents used by 25+ employees including CFO and lead investors saving 12 hours of work per week.
- Engineered a CRM system using a **Node.js/Express backend**, **Python** for automation scripts, and **Harmonic and Affinity APIs** for external data integration, which logs, tracks, and analyzes over **25k** people, companies, and touchpoints.
- Developed AI pitch deck ingestor using **Python** and **GPT4o** to extract key metrics from pitch decks saving investors **~1 hour** per deck.

University of Chicago Institute of Politics – Chicago (October 2023 - January 2024)

Software Developer

- Collaborated with a team of 10 undergraduate and masters students at UChicago's Tech Team to develop software for a non-profit organization.
- Utilized **Google APIs** in conjunction with **PyPDF2** and **Python** scripting to create program that automatically catalogs citations and sentiments from anti-abortion pamphlets using **natural language processing**, reducing manual labor by 5+ hours per week.
- Led team in charge of identifying pdf uploads and transforming them into raw text data, allowing for easy and efficient analysis.

Einav Lab (Stanford School of Medicine) – Palo Alto, CA (September 2022 - February 2023)

Lab Research and Data Analytics Intern

- Ran and analyzed results from **100+** protein amplification assays in **jupyter notebook**, resulting in improved efficiency.
- Screened efficacy of **300+** drug compounds against VEEV and analyzed data in **R** leading to publication of a scientific article.

PROJECTS

AI-Powered Content Recommendation System - Individual Project (May 2024-Present)

- Scraped youtube and other content to train an AI-powered content recommendation system based on real-time user preferences.
- Utilized machine learning techniques with **Python** to perform content-based and collaborative filtering on vectorized text inputs.
- Created user-friendly interfaces for managing user profiles, preferences, and content sessions using **Angular**, **TypeScript**, **SCSS**, and **HTML**, and implemented state management, session control, and authentication using **JWT**.
- Developed and integrated **RESTful APIs using Node.js and Express.js** for user authentication and managed user data with **MongoDB**.

Machine Learning NBA Award Prediction Model - Individual Project (May 2024-June 2024)

- Scraped, cleaned, and prepared 100's of pages of statistical data using **BeautifulSoup**, **Pandas**, and **more**.
- Designed a calibrated ML-model using **random forest regression** and **isotonic regression** to predict NBA awards at **>98%** accuracy.
- Created website using **HTML**, **CSS**, and **JavaScript** hosted on **Render**, allowing users to receive real-time predictions on user-entered data.

Game Logic and Bot Development for GO Game -UChicago (December 2023-January 2024)

- Led the development of core game logic designed game structure and framework using **Python**, ensuring robust and scalable code.
- Developed an advanced game-playing bot script using **Python** which analyzed future moves leading to a **>95%** win rate using .
- Coordinated team efforts through structured milestones, and rigorous testing, ensuring high-quality code and on-time project delivery.

Nueva Basketball Database Creation and Upkeep – Individual Project (March-July 2023)

- Created and maintained **mySQL** database for high school basketball statistics with **8+** years of data on individual and team statistics.
- Designed functions within **SQL** to update **5+** tables within database upon creation of new data to simplify user experience.

SKILLS/INTERESTS

Programming: Python (Numpy, Pandas, TensorFlow, Sci-kit Learn, Matplotlib+), JavaScript, C, SQL, HTML, CSS, R, RESTful APIs

Interests: Basketball, Weightlifting, Baking, Community Service, Fantasy Football, Restaurant Enthusiast, Amateur Juggler
